TITLE : KEYLESS ENTRY SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To provide a keyless entry system which allows many specific drivers to share many specific vehicles.

SOLUTION: At each of plural transmitters 1, information about drivers' fingerprints is obtained by a fingerprint sensor 5, and the fingerprint information obtained is transmitted from a transmitting part 17. At each of plural vehicles, a plurality of fingerprint information feature point data are preregistered in a feature point storage part 29, and a feature point data extracting part 23 extracts feature point data from the fingerprint information received by a receiving part 21; a collating part 25 collates the feature point data against the plurality of fingerprint information feature point data preregistered, and when both of the feature point data are coincident, at least a vehicle door lock/unlock signal is output from a control device 9.
